Which agents are about to stop selling?

Using sales recency and app browsing to spot dropper agents early

Agent behaviour analysis · October 2026

We want to reach agents before they stop selling

A dropper is an agent who has stopped making sales. Once an agent has stopped, winning them back is harder, so the goal is to spot the warning signs while they are still active.

765

agents analysed

Snapshot of Oct 12, 2026

187

have already dropped

No sale since Sep 30

578

are still selling

At least 1 sale since Sep 30

Sep 30 is the dividing line: that is when the app started recording which products agents view.

We read three signals for every agent

Recency

How many days since the agent's last sale. The longer the silence, the higher the risk.

Browsing

How often the agent opens products on the app. Shows whether they are still engaged, even without selling.

Track record

How much the agent sold in the past. A big seller who slows down is a bigger loss than a small one.

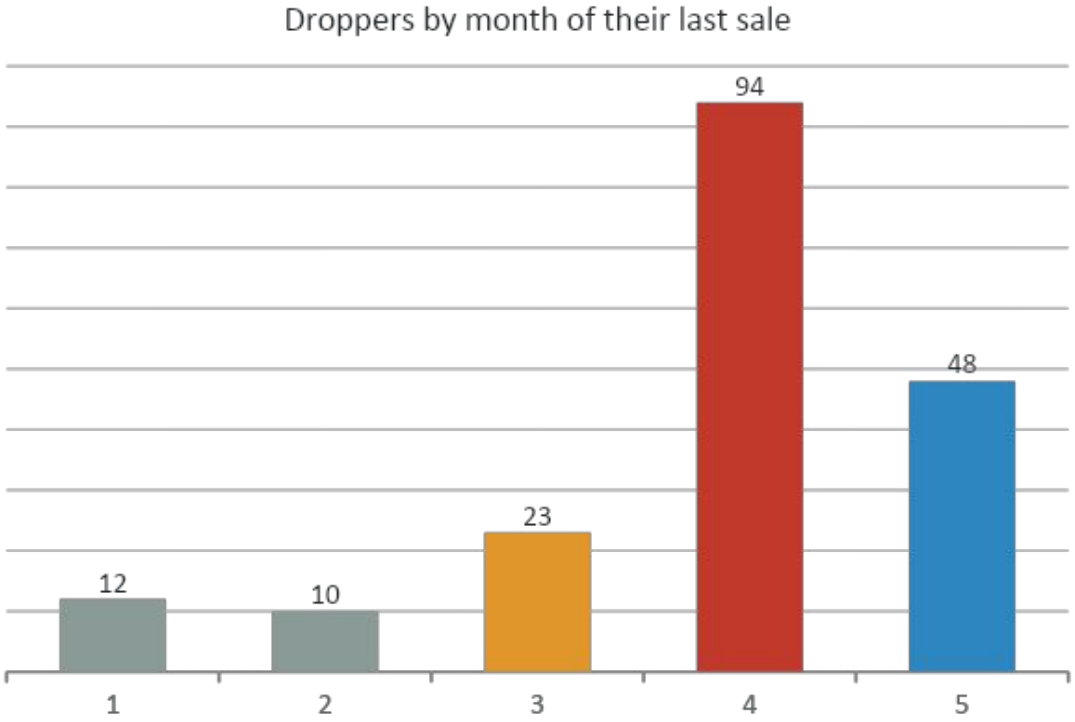

Droppers look very different from active agents

The typical (middle) agent in each group:

	Dropper	Active
App views since Sep 30	2	10
Different products viewed	1	3
Sales over their lifetime	9	159
Days since last sale	28	3

Droppers browse less, have smaller sales histories and have gone much longer without selling.

Most droppers stopped only recently

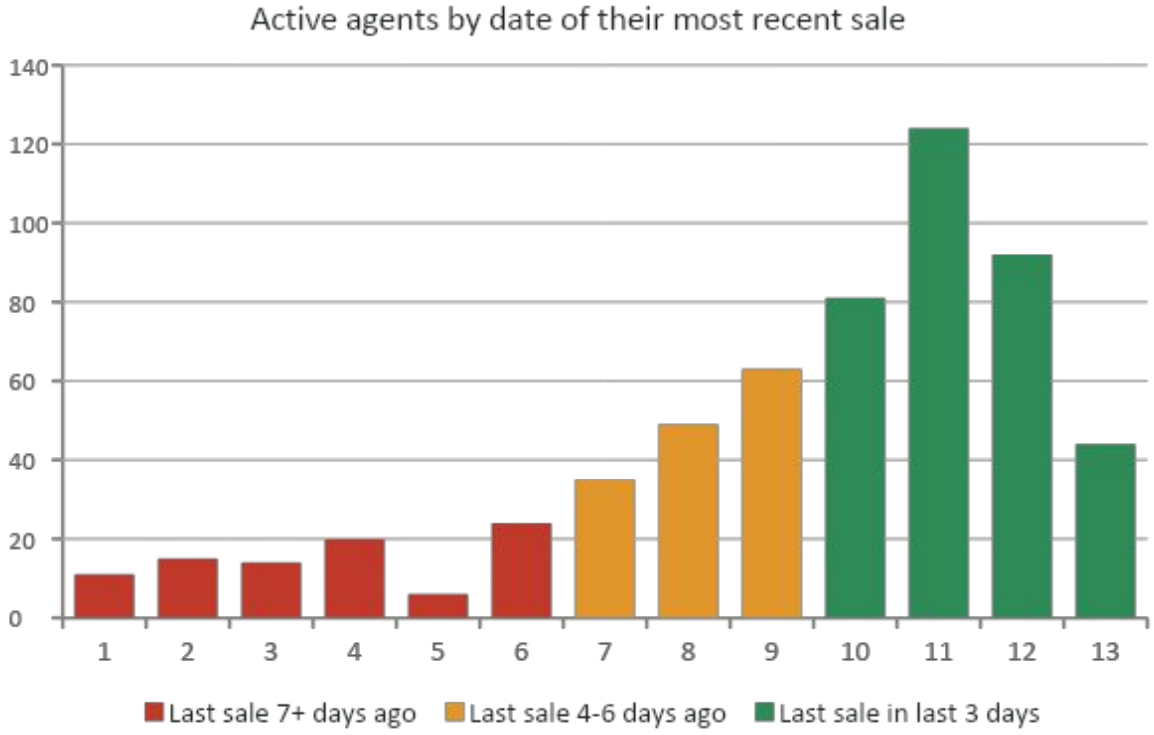

94 of 187

droppers made their last sale in September, just before tracking began.

That is good news: these agents were selling a few weeks ago and are still worth winning back.

48 agents have never made a sale; they need onboarding, not rescue.

Among active agents, a week of silence stands out

Busy agents sell often, so their last sale is recent.

The agents who sold more since Sep 30 almost always had a sale in the last few days.

The red bars are agents who sold early in October and then went quiet for a week or more.

Active agents by days since last sale

341

Recently active

Sold in the last 0–3 days

No action needed

147

Watchlist

Last sale 4–6 days ago

Keep an eye on them

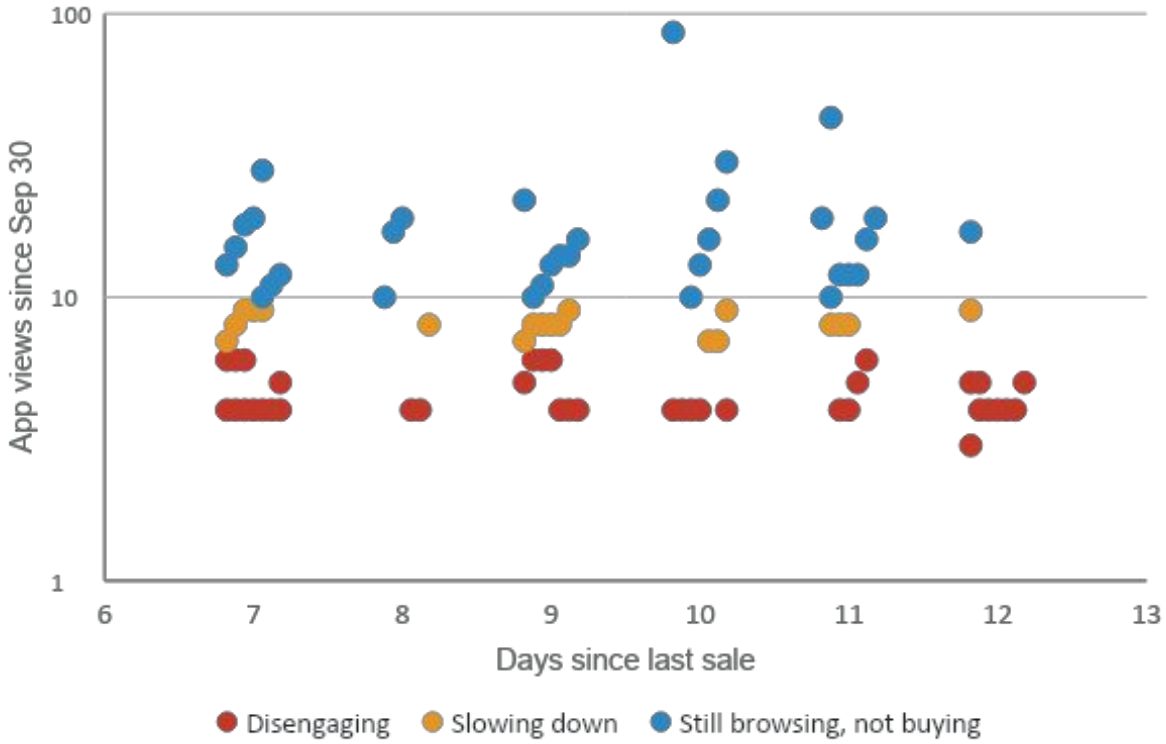

90

Potential droppers

No sale for 7+ days

Follow up now

The potential droppers app activity

Each dot is one of the 90 potential droppers.

All have been quiet for about the same time (typically 9 days).

What separates them is browsing, compared with a typical active agent (10 views).

Three kinds of at-risk agent, three responses

38

Disengaging

Hardly opening the app and not selling.

Highest risk. Call first and find out what has changed.

19

Slowing down

Some browsing, but less than a typical agent.

Check in early, before interest fades further.

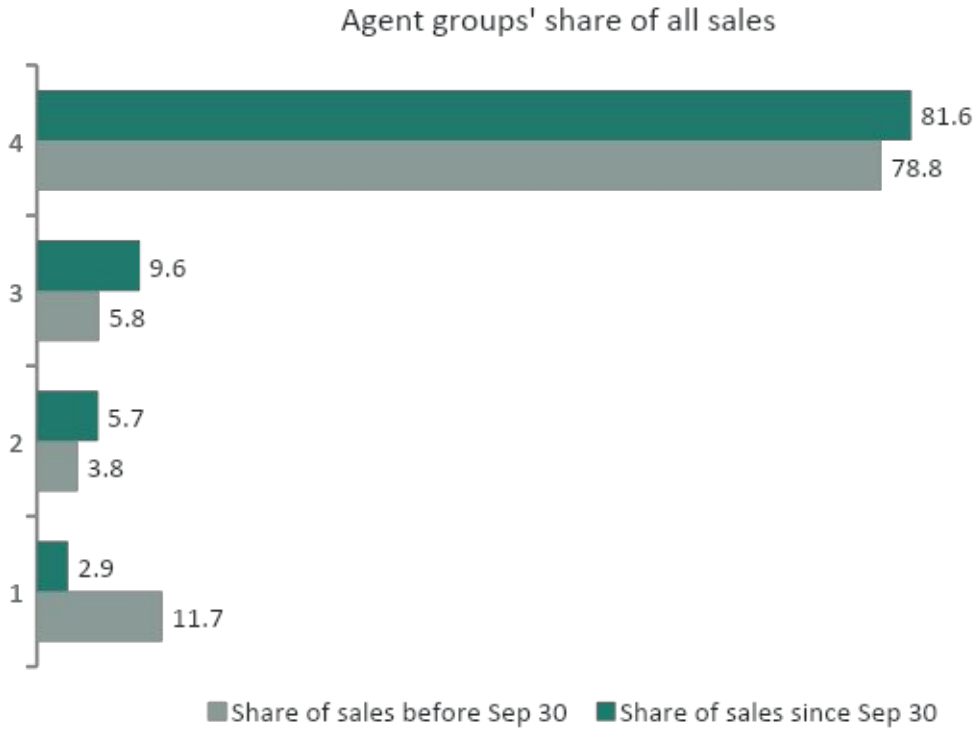

33

Browsing, not buying

As active on the app as a typical agent, but no recent sale.

Help them close: pricing, product or payment issues.

Watch for big sellers who have slowed down

44 agents

used to bring in 11.7% of sales. Since Sep 30 they bring in just 2.9%.

They still pass a simple “has made a sale” check, but they are selling far below their own history. They are the next droppers if nothing changes.

The result: a named, prioritised follow-up list

Agent	Group	County	Days since sale	App views
Bilha Wangari	Disengaging	Trans Nzoia	12	3
Kevin Omondi	Disengaging	Nairobi City	12	4
Charles Gitari	Disengaging	Kiambu	12	4
Loise Mwendwa	Slowing down	Nakuru	12	9
Erick Karera	Slowing down	Nairobi City	11	8
Monica Daud	Still browsing	Nairobi City	12	17
Razz Deka	Still browsing	Nairobi City	11	16

A sample from the full list of 90. The full list is sorted so the highest-risk agents come first.

What the data cannot tell us yet

Short window

Tracking started on Sep 30, so we have about 12 days. Agents who sell monthly can look like droppers when they are not.

Browsing has no dates

We know how much an agent browsed, but not whether they browsed after their last sale, which would be the clearest sign.

Old platform sales

Some agents may still sell on the old platform. A drop on the app is not always a drop in business.

Payment not tracked

A policy written is not proof it was paid, so some 'sales' may not be real business.

Next steps

- Reach out to the disengaging agents , then the 19 slowing down
- Support the 33 still-browsing agents to close their sales
- Rerun the list weekly and adjust each agent's alert to their usual selling pace
- Ask the data team for dated browsing, payment status and platform for each sale
